DELL'ESISTENTE E LA
PROGETTAZIONE IN BIM**

FIRENZE | 24 settembre 2020

LA SOCIETA'

PROGETTO
RIQUALIFICAZIONE

One Works is a global design and consultancy firm, offering an integrated approach to architecture, infrastructure and urban engineering.

We believe in creating dynamic, intuitive places where people and communities can connect with their environment, and with each other.

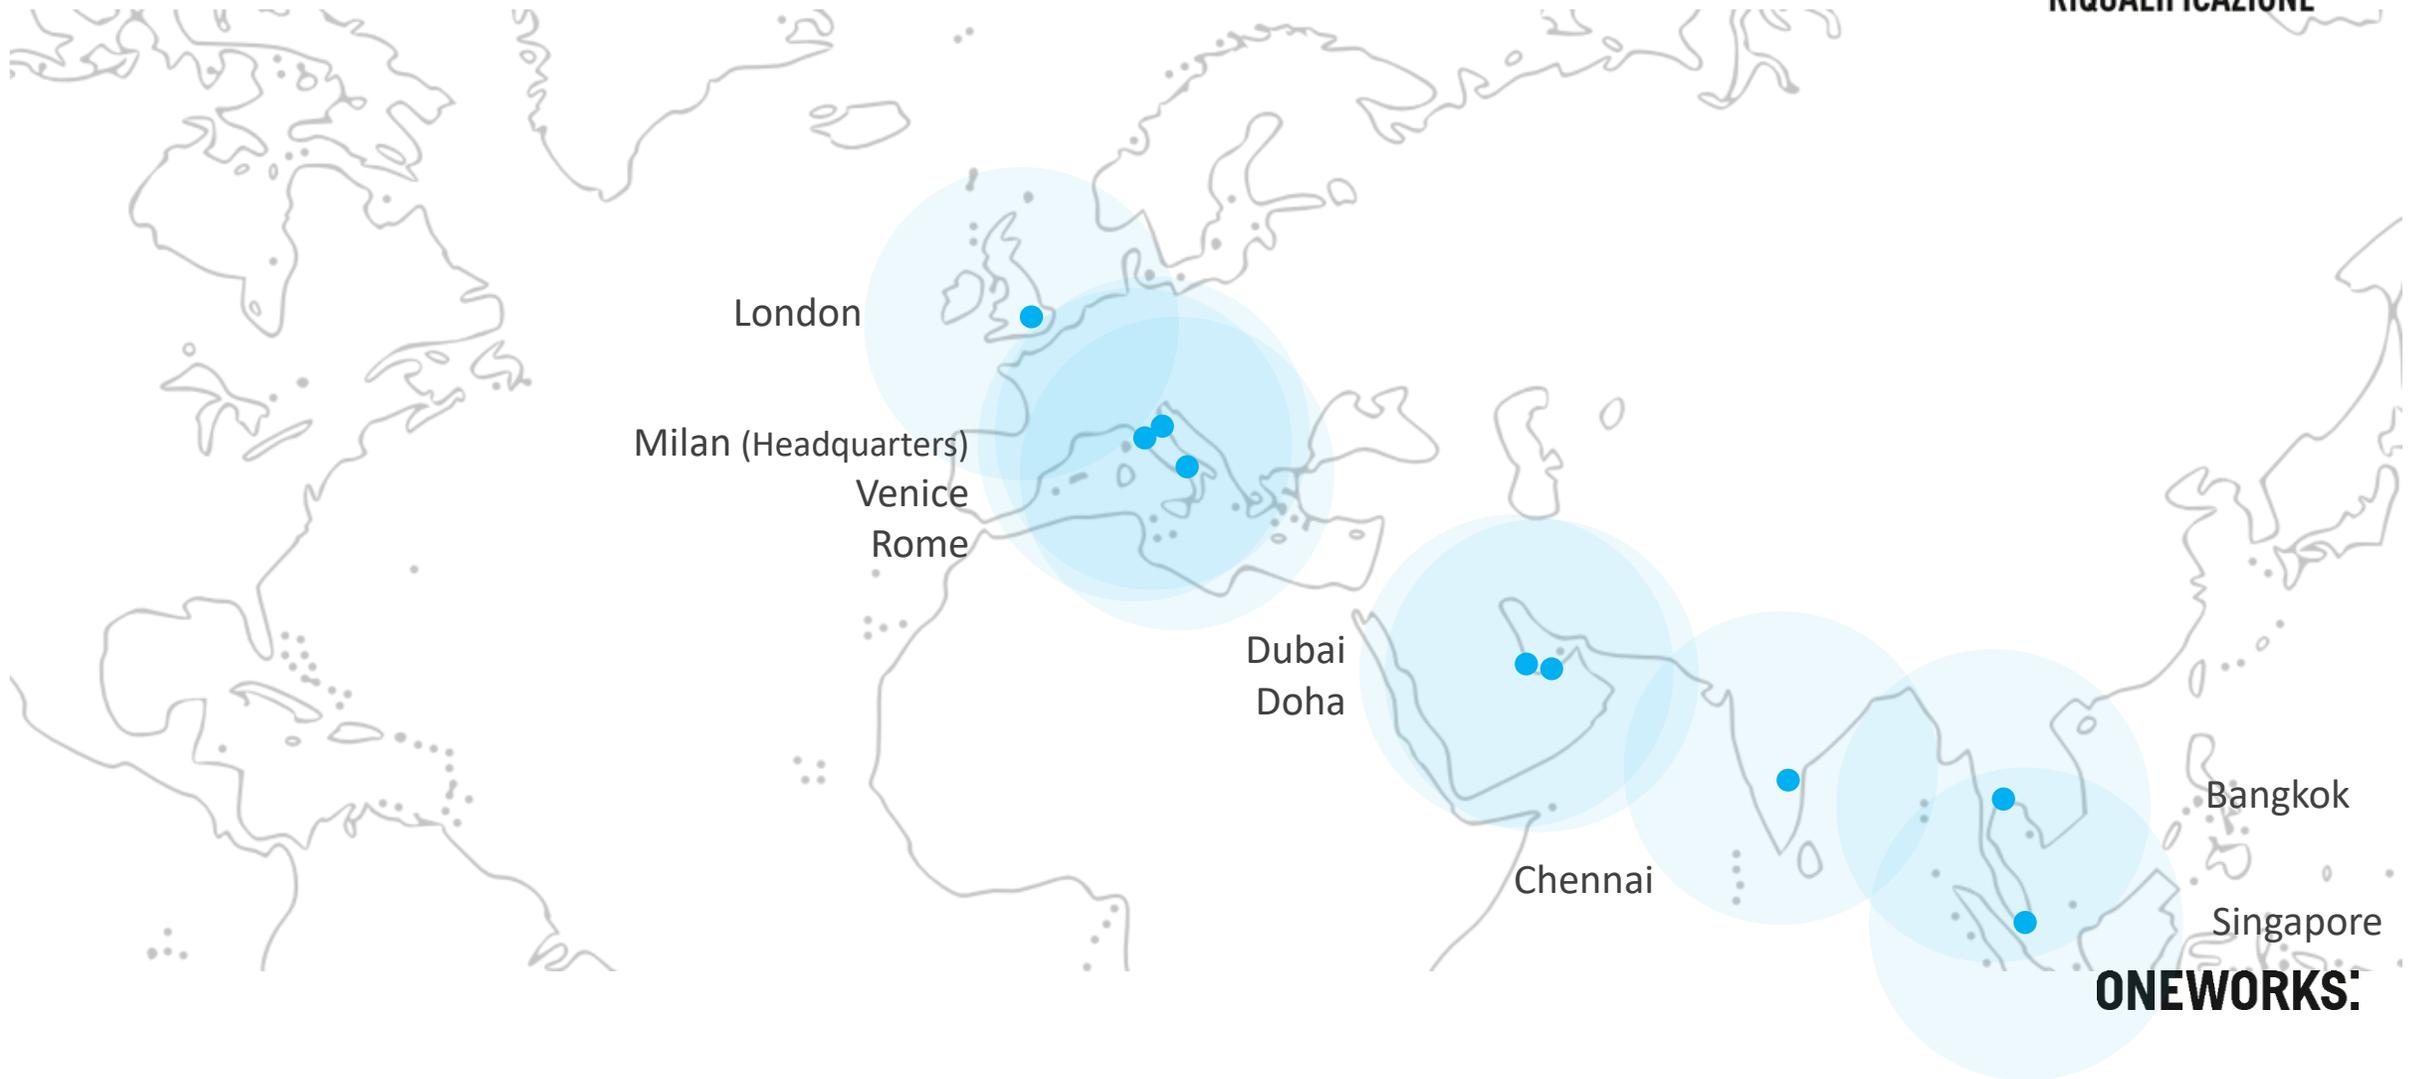

We continually **invest in technology and training**, including BIM, to enhance the services we offer.

CHE COS'E' IL BIM?

ONEWORKS:

CHE COS'E' IL BIM?

PROGETTO
RIQUALIFICAZIONE

BIM or **Building Information Modelling** is a process for creating and managing **information** on a construction project across the project **lifecycle**. One of the key outputs of this process is the Building Information Model, the digital description of every aspect of the built asset. This model draws on information assembled **collaboratively** and updated at key stages of a project. Creating a digital Building Information Model enables those who interact with the building to optimize their actions, resulting in a greater whole life value for the asset.

UK National Building Specification (NBS), RIBA

Building Information Modeling (BIM) is a digital representation of physical and functional characteristics of a facility. A BIM is a **shared knowledge resource** for **information** about a facility forming a reliable basis for decisions during its **life-cycle**; defined as existing from earliest conception to demolition..

USA National BIM Standard Commission

OVERVIEW OF THE AIRPORT EXPANSION

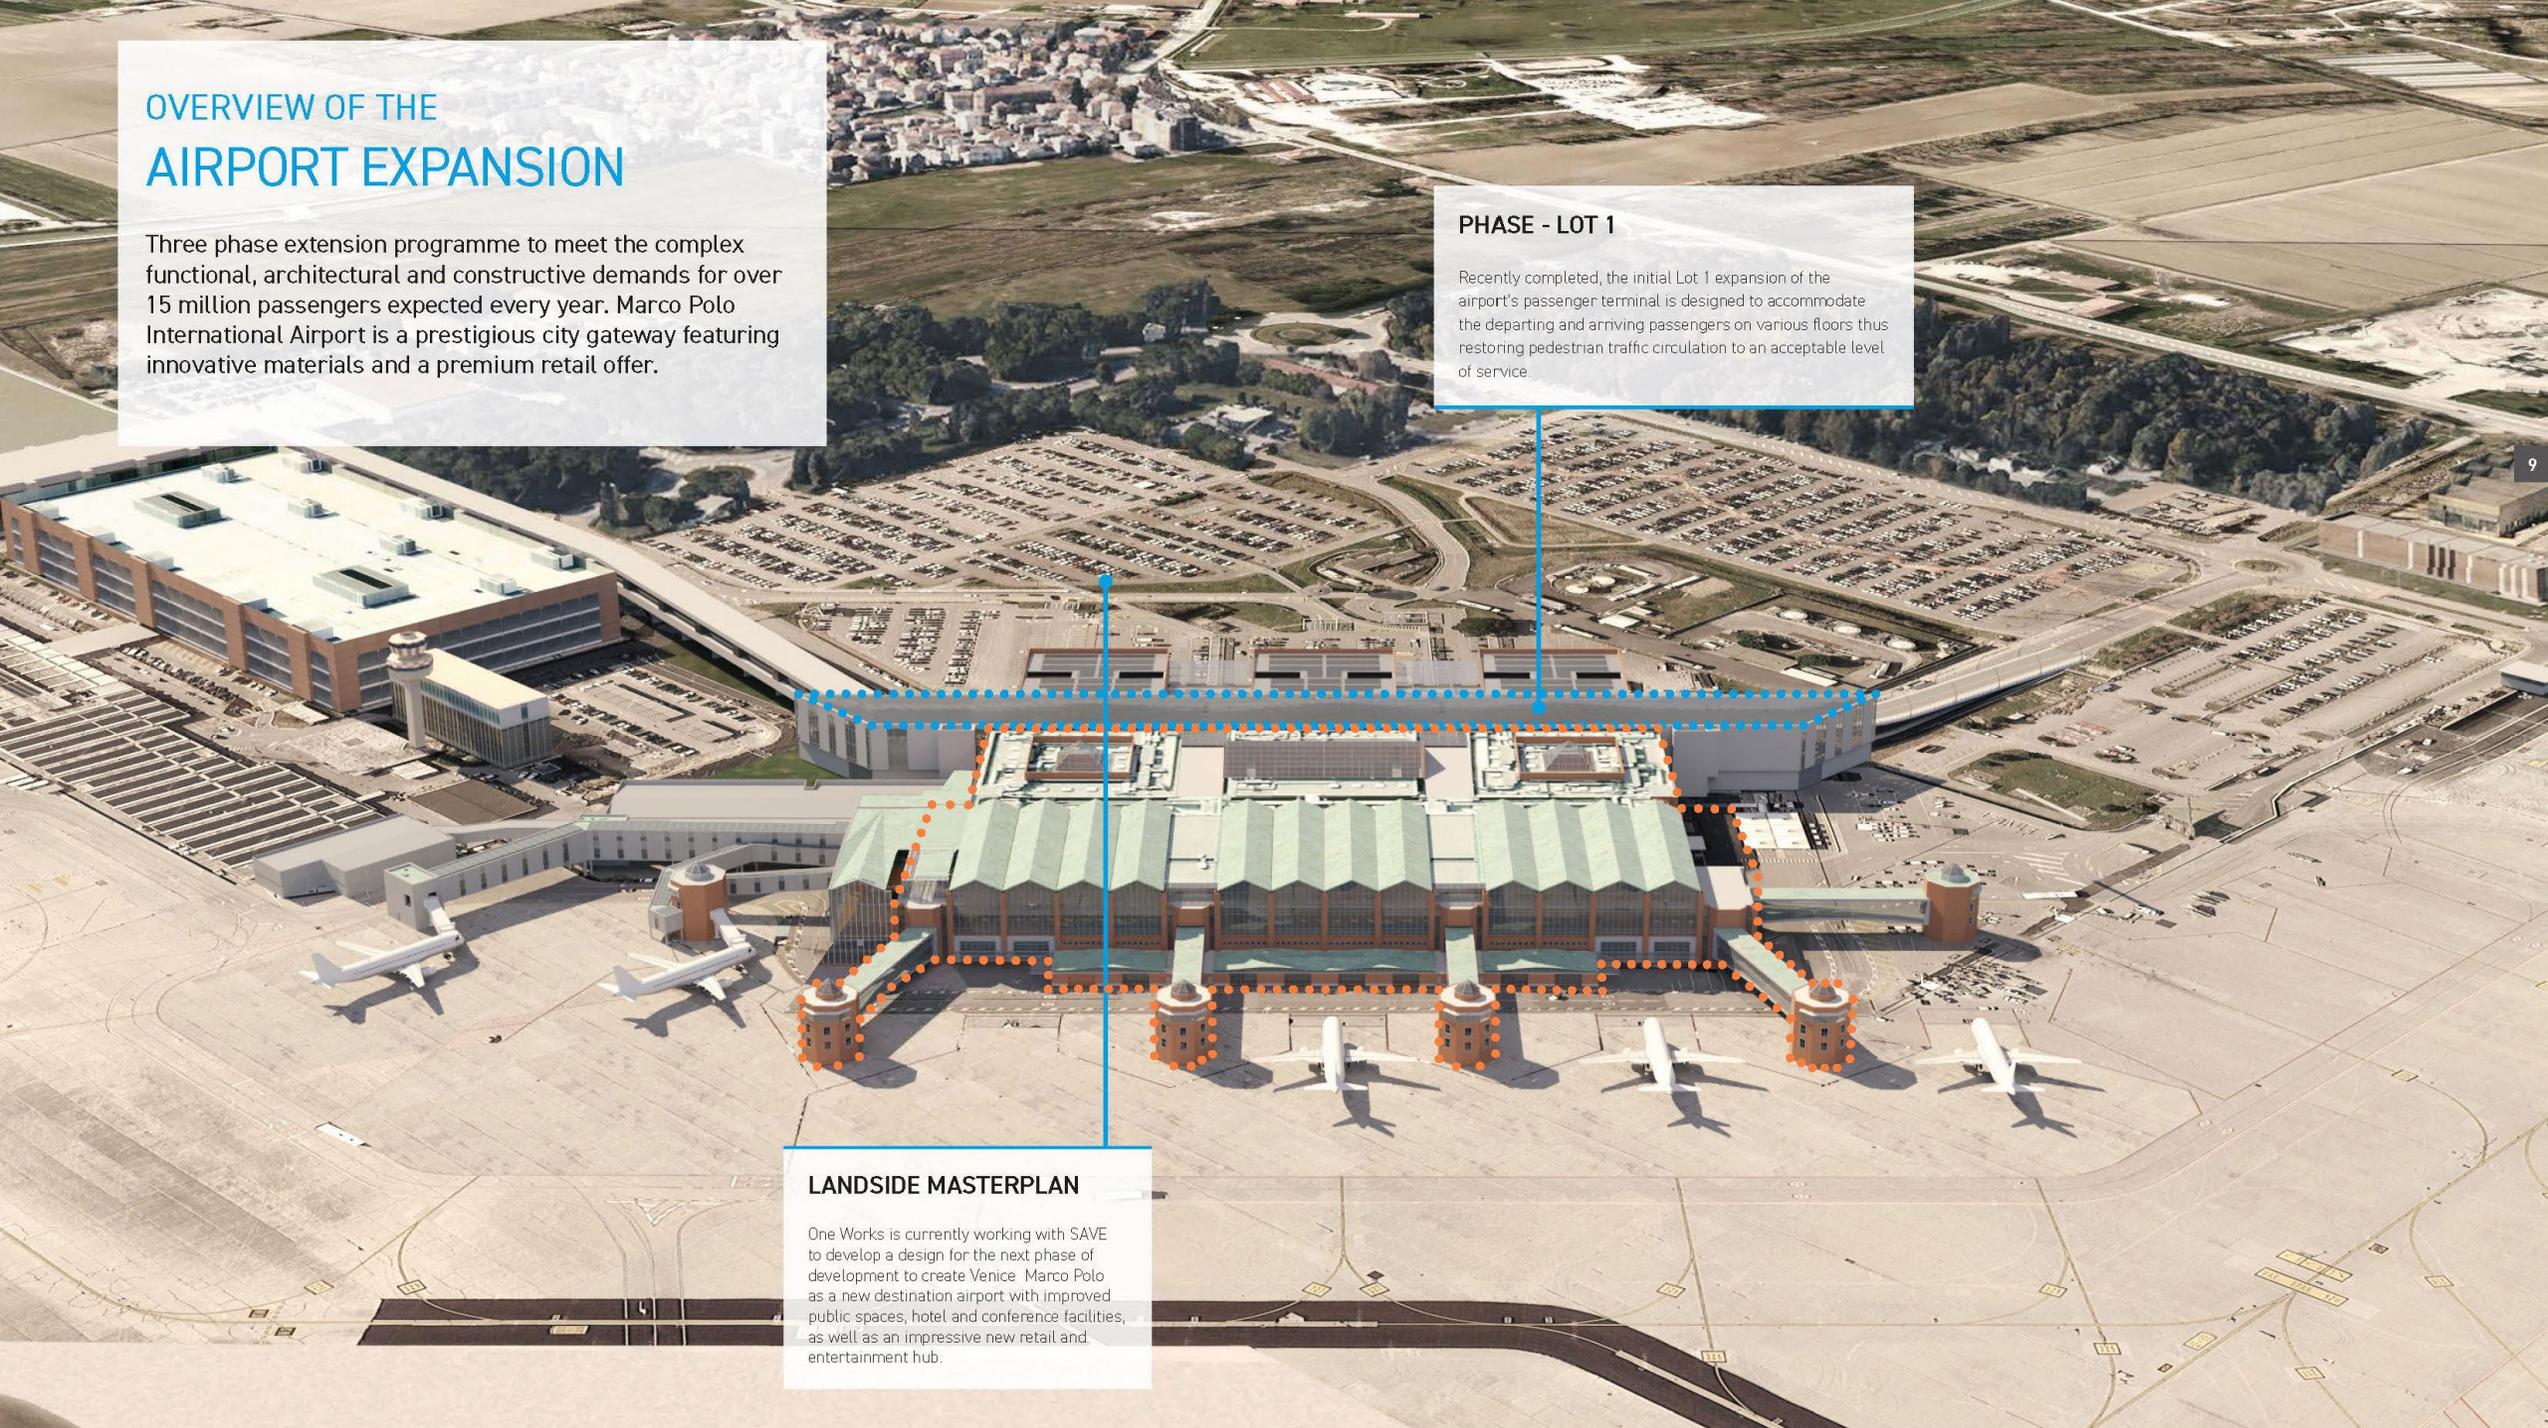

Three phase extension programme to meet the complex functional, architectural and constructive demands for over 15 million passengers expected every year. Marco Polo International Airport is a prestigious city gateway featuring innovative materials and a premium retail offer.

PHASE - LOT 1

Recently completed, the initial Lot 1 expansion of the airport's passenger terminal is designed to accommodate the departing and arriving passengers on various floors thus restoring pedestrian traffic circulation to an acceptable level of service.

LANDSIDE MASTERPLAN

One Works is currently working with SAVE to develop a design for the next phase of development to create Venice Marco Polo as a new destination airport with improved public spaces, hotel and conference facilities, as well as an impressive new retail and entertainment hub.

OVERVIEW OF THE AIRPORT EXPANSION

Three phase extension programme to meet the complex functional, architectural and constructive demands for over 15 million passengers expected every year. Marco Polo International Airport is a prestigious city gateway featuring innovative materials and a premium retail offer.

PHASE - LOT 1

Recently completed, the initial Lot 1 expansion of the airport's passenger terminal is designed to accommodate the departing and arriving passengers on various floors thus restoring pedestrian traffic circulation to an acceptable level of service.

PHASE - LOT 2B

One Works is working on the design development of Lot 2B, placed south of the existing terminal, that will serve Extra-Schengen passengers. The expansion is planned in 4 phases. The first 3 expansion phases, guarantee an increase in the gross surface area of the terminal of around 49,900 sqm. Additional 15,600 sqm are supplied instead from phase 4, thus bringing the total gross area of the terminal to approximately 204,300 square meters.

LANDSIDE MASTERPLAN

One Works is currently working with SAVE to develop a design for the next phase of development to create Venice Marco Polo as a new destination airport with improved public spaces, hotel and conference facilities, as well as an impressive new retail and entertainment hub.

PHASE - LOT 2A

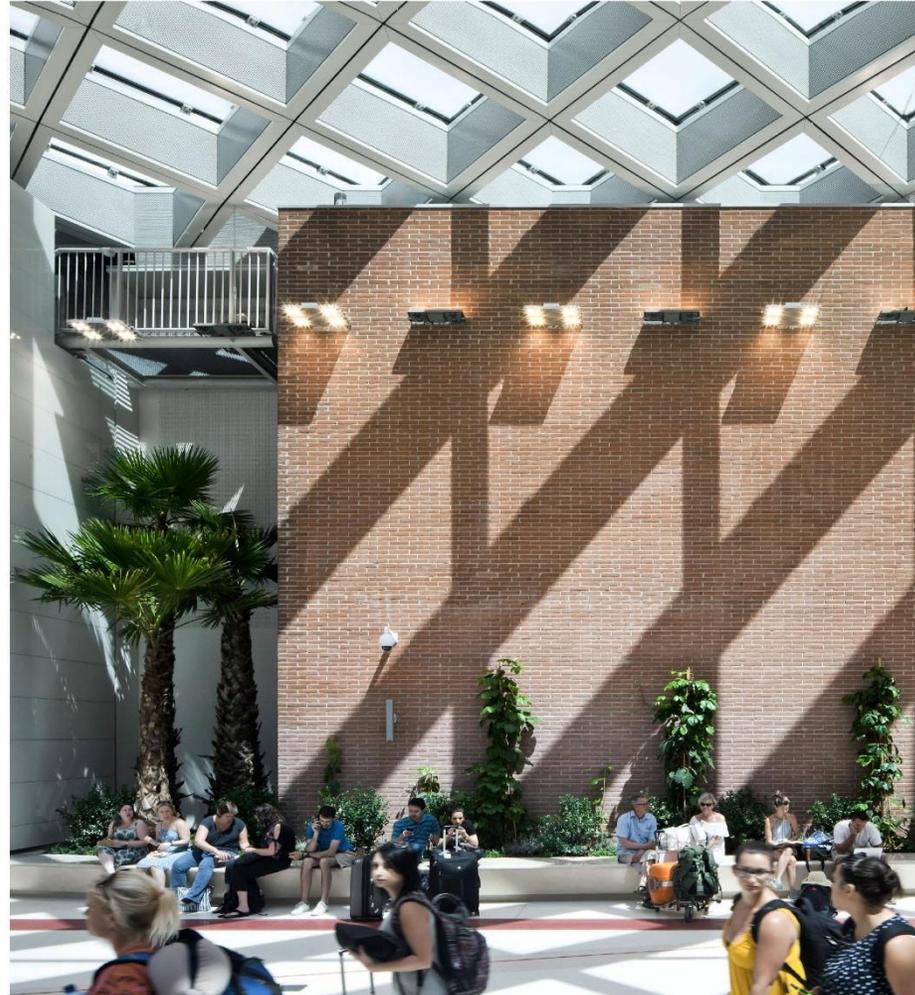

Part two of the second phase of expansion (due to complete in 2025) and comprises the construction of a new north wing to increase of the terminal's operational capacity on both airside and landside. Through the creation of new volumes and rationalization of existing functions, dramatic improvements will be made to services offered and passenger experience.

IL PROGETTO

A NEW LIGHT-FILLED TERMINAL HALL

One Works provided full architectural design services for the new departure lounge, as well as acting as artistic supervisors during construction to provide a welcoming and relaxing environment for all.

The new space offers a spacious welcome for passengers, channelling them into an elegant, light-filled area where they can shop, eat or just relax while waiting for their flight.

PROGETTO
RIQUALIFICAZIONE

ONWORKS:

IL PROGETTO

THE EXPANDED TERMINAL HALL

This phase represents the second important extension of the passenger terminal that was necessary, mainly to adapt the capacity of the airport to the growing traffic demand.

One Works paid careful attention to all of the construction materials and finishes throughout this terminal refurbishment and expansion project to ensure they embodied the architectural vision for the airport's future and maintained consistency with the buildings' original fabric.

PROGETTO
RIQUALIFICAZIONE

ONEWORKS:

ONWORKS:

IL PROGETTO

THE EXPANDED BOARDING AREAS

Local materials such as bricks and stone linked the airport to the lagoon landscape while maximizing durability and sustainability. Iron and glass created the transparency required to allow the natural light to illuminate the space.

Textures, colors, and lighting also evoked the Venetian environment, identifying the airport's sense of place while providing the best possible customer experience and highlighting its spaciousness.
